List of companies that will buy reclaimed chlorofluorocarbon refrigerants (CFCs) from counties:

Remtec International 6150 Mercer Drive Bowling Green, OH 42402 Phone: 888-873-6832 Gary Stofan Minimum 100lbs R-22

Polar Technology Nashville, Tn. Marcus Crutcher 888-834-0233

Refrigerant Recovery Service Inc. Wilmington, Del. Frank Brown 703-731-3377

Some key points that counties should keep in mind about recovering CFCs from appliances:

- Treat CFC bearing appliances with care until it is verified that the appliance has been evacuated of CFCs. Do not handle the appliance roughly or with heavy machinery as this has a tendency to rupture refrigerant lines and release gas.
- After it has been verified that no gas remains in the appliance, tag the appliance so that it is obvious that the appliance has been checked.
- Do not allow the different types of CFCs (R12, R122, R134A, etc.) to mix. CFCs will get their highest value when they are as pure as possible. Heavily mixed gasses have no resale value and must be destroyed. Counties can apply for a grant from the Solid Waste Section to buy dedicated machines for each type of gas plus a gas identifier.
